

BARR'S English Daffodils and Tulips, Lilies, Pæonies, Etc.

BARR'S DAFFODILS were Awarded the only GOLD MEDAL at the Second Great Daffodil Conference, 1890.

THE HOME OF NARCISSUS CYCLAMINEUS.

This unique Daffodil was found wild in its largest development in wet meadows. Rev. Dr. Watson, Largs, has flowered it annually since its introduction, in various positions, but the most successful culture is in moist loam at the bottom of a wall facing north-east. Mrs. Buchanan, Fairlie, has a row of this gem flowering beautifully in a border facing the north. Dr. Foster, of Cambridge, has grown it in his garden (subsoil of chalk) since 1889, and each year it has improved, and is now increasing. Mr. F. W. Burbidge has grown it successfully since 1886 in pots, frames, out-doors against a warm house, and latterly bloomed it in the grass in a damp meadow. Mr. C. J. Backhouse, of Weardale, grows it successfully all over his garden, but on rockwork the flowers are largest. Mrs. Godfrey, Yoxford, has bloomed it annually in grass since 1887. Mr. Osgood H. Mackenzie, of Poolewe, flowers it annually on the exposed top of a rockery. Mr. T. H. Burroughes, Stamford, has had great success since 1887 in the flowering and increasing of *Corbularia citrina* in milk pans and troughs. *N. Cyclamineus* may be similarly treated, both these *Narcissi* being semi-aquatic. For detailed culture, see page 3.

BARR & SON,
12 King Street, Covent Garden, London.

Surbiton Nurseries—LONG DITTON, SURREY, a few minutes from Surbiton Station (S.W.R.)
Visitors invited to the Nurseries during Spring, Summer, and Autumn, to see BARR'S DAFFODILS, IRISES, PÆONIES, SUNFLOWERS, MICHAELMAS DAISIES, and other HARDY HERBACEOUS and BULBOUS PLANTS.
A Fine Display of CUT FLOWERS is maintained during the Season at King Street, Covent Garden.

SPECIAL NOTICES.

1. **Quality.**—All bulbs and plants are carefully selected.
- II. **Narcissus and Experimental Grounds** are close to the **Surbiton New Recreation Grounds**, and may be reached on foot in a few minutes from Surbiton Station, S.W.R., or by cab, the fare being *1s. to the Pound Farm entrance of the Nurseries*. Visitors at all seasons will find many things of beauty in **Hardy Bulbs, Tubers, and Hardy Herbaceous Perennial Plants**. The New Rockeries should be visited by those contemplating such formations in their gardens. In spring the brilliancy of our new English Daffodils, Chionodoxas, Anemones, Tulips, etc., surpasses description. *Visitors invited to enjoy the floral treat.*
- III. **Parcel Post.**—We shall in all cases use the **Parcel Post** when cheapest and the articles ordered weigh under eleven pounds, and admit of being packed for safe transmission by "Parcel Post."
- IV. **Carriage by Rail** may be deducted at settlement of account on orders for Bulbs to any Railway Station in Great Britain, and to all ports on the Irish Coast.
- V. **Orders, paid in advance.**—Carriage, in all such cases, will be **prepaid**.
- VI. **Returned Empties.**—A small charge is made for packages, but if returned within a fortnight, allowance is made for the same. *Returned empties should have the sender's name on the address label for identification, and a notification should be sent by post, stating date of dispatch and name of Railway Company.*
- VII. **Fruit and Forest Trees, Shrubs, Plants in pots; Soils, Watson's Lawn Sand, Manures, Anti-Blight and Insecticides**—on these we do not allow carriage.
- VIII. **Five per cent.** may be deducted from accounts if paid within one month from date of invoice.
- IX. **Money Orders and Postal Orders** to be made payable at Covent Garden Post Office; these and all cheques should be crossed "London and County Bank." Small amounts may be remitted in Postage Stamps or Coin, in a Registered Letter.
- X. **Naming Daffodils.**—Cut specimens of Daffodils we undertake to name correctly, at the charge of 6d. each, 2s. 6d. per dozen, 15s. per 100, to cover attendant expenses. Address all cut specimens to be named, accompanied by a remittance, to our Nurseries, Ditton Hill, Surrey.
- XI. **Cut Daffodil Flowers.**—When in bloom out-of-doors, cut specimens of Daffodils, correctly named, we forward post-paid at a moderate charge, to cover attendant expenses, thus offering a good opportunity to those who wish to extend their knowledge of these lovely flowers of spring. If a list of the varieties possessed by the sender is enclosed, such sorts will be omitted. *A remittance should accompany the order.*

12 Cut Daffodil flowers in 12 varieties.....	2/6	30 Cut Daffodil flowers in 30 varieties.....	6/6

Cut Daffodil flowers (without names) in variety, for decoration, 5/6, 7/6 & 10/6 per 100.
- XII. **Daffodil Illustrations and Coloured Plates** can be had, post-free, at following charges—
 - No. 1. Two large uncoloured Illustrations—one representing a Group of Yellow Trumpet Daffodils, and the other a Group of White Trumpet Daffodils—drawn and arranged for the "*Gardeners' Chronicle*" by Agnes Barr. The Two Plates for 1s. 6d.
 - No. 2. Beautiful Coloured Plate of a Group of White Trumpet Daffodils. 1s.
 - No. 3. Beautiful Coloured Plate of Daffodils, representing *Incomparabilis Gloria Mundi*, *Incomparabilis Princess Mary*, and *Leedsii Beatrice*. 1s.
 - No. 4. Beautiful Coloured Plate of Daffodil *Bicolor Horsfieldii*. 1s.
 - No. 5. Beautiful Coloured Plate of Daffodils, representing *Cyclamineus* (the Cyclamen-flowered Daffodil) and *Triandrus albus* (Angels' Tears Daffodil). 1s.
 - No. 6. Beautiful Coloured Plate of Daffodils, representing a Group of *Poeticus* and *Burbidgei* varieties. 1s.
 - No. 7. Beautiful Coloured Plate of a Group of Daffodils, including *Cernuus pulcher*, *Johnstoni* Queen of Spain, *Bicolor J. B. M. Camm*, *Leedsii Superbus*, *Nelsoni* varieties, etc. 1s.
 - No. 8. Coloured Plate of a Group of Barr's Beautiful New Daffodil "Queen of Spain." 6d.

A COMPLETE SET OF THE ABOVE PLATES SENT, POST PAID, FOR 6s.
- With Orders for Daffodil Bulbs to value 21s. and upwards, the *Two Illustrations*, No. 1, will be presented; with Daffodil orders of £5 5s. and upwards, Nos. 1, 6, and 8 will be sent.
- N.B.—A few copies still remain of "Ye Daffodyl," price 1s. This is a record of the First Daffodil Conference, 1884, it contains a great deal of very interesting matter connected with Daffodils, and a complete descriptive list of all known Daffodils, ancient and modern.

BARR'S DAFFODIL SILVER CUPS TO BE AWARDED AS PRIZES, 1896.

THESE BEAUTIFUL CUPS ARE OF GREAT ARTISTIC MERIT, AND SPECIALLY DESIGNED BY
MR. H. G. MOON. See outside page of Cover.

TO BE COMPETED FOR AS UNDER.

LONDON.—Royal Botanic Society, Regents Park, at the Great International Daffodil Exhibition and Congress in April, the date will be fixed in March to suit the season, due notice will be given by advertisement in all the gardening papers. Barr's Medals will also be awarded. If intending Competitors will send in their names to us we shall forward date and full particulars as soon as the Exhibition Committee of the Royal Botanic Society settle the same.

It has also been arranged that Barr's Medals will be awarded to Forced Daffodils at the Royal Botanic Society's March Spring Flower Show.

DUBLIN.—Royal Horticultural Society of Ireland, at their Spring Exhibition, Royal University Buildings, Parisfort Terrace, April (date not yet fixed).

EDINBURGH.—Royal Caledonian Horticultural Society, Waverley Market, April (date not yet fixed).

Birmingham Daffodil Show, April (date will be fixed in March).

Further particulars will be found in a leaflet, sent on application.

BARR'S

BEAUTIFUL ENGLISH

HARDY DAFFODILS,

FOR SPRING-FLOWERING IN OR OUT OF DOORS.

Awarded the only Gold Medal at the Daffodil Conference, April 15th, 1890.

CONTENTS.

BARR'S PRIZE CUPS & MEDALS offered for Exhibitions of CUT DAFFODILS,
see Special Notices.

Visitors are invited to inspect BARR'S DAFFODILS in flower during March, April, and May, at their NURSERIES, LONG DITTON, close to the Surbiton new Recreation Grounds, being a few minutes from SURBITON STATION, South Western Railway, from Waterloo direct, or from any Station on the Metropolitan District Lines of Rail, changing at Wimbledon for Surbiton.

Part II.

BARR'S BEAUTIFUL "ENGLISH AMATEUR" TULIPS, awarded the Large Silver Flora Medal of the R.H.S., May 9th, 1893; at the Temple Show the Cup of the R.H.S., May 25th, 1893; and May 8th, 1894, the Gilt Flora Medal of the R.H.S. Our collection of "English Amateur" Tulips, which may be seen during May at our Nurseries, Long Ditton, number about 450 varieties, of these 20,000 to 30,000 bulbs will this Autumn be planted, and the sight is expected to be the grandest of the kind ever seen in England, *see page 15.*

Barr's Prize Medals for the best Collection of "English Amateur" Tulips will be awarded by the Southern Branch of the Royal National Tulip Society in London, 1896. Notice of date and place of meeting will be given in due time.

ENTERED AT STATIONERS' HALL.]

For Sale, a Copy of John Parkinson's "PARADISI IN SOLE PARADISUS TERRESTRIS," First Edition, old calf, 1629, folio, in very good preservation; a bargain, £6 6s.

BARR'S HARDY ENGLISH DAFFODILS, DAFFODOWNDILLIES.

To these was Awarded the only Gold Medal of the Daffodil Conference, held in the Chiswick Gardens of the Royal Horticultural Society, April 16th, 1890.

NEWSPAPER NOTICES, 1895.

"When the hard frosts and nipping winds of a few weeks since were blighting and blackening all but the very hardest of evergreens in our parks, it is satisfactory to know that the Daffodil, which defies alike the smoke of London and the rigours of the severest winters which are known in these isles, suffered not the least harm. Favoured by genial days and nights on the threshold of May, they have come forth this season in their fullest splendour, and the famous grounds of Messrs. Barr and Son at Long-Ditton were yesterday bright with sheets of gold, contrasting effectively with wide plots of blue and purple Muscaris, scattered patches of pale Narcissi, and beds of Tulips of every hue. The Long-Ditton ground, as we have already had occasion to observe, extends to some fifteen acres, of which five or six are devoted to Daffodil culture; yet, in this little flower farm every year millions of bulbs are raised. The Daffodils alone now count over five hundred varieties from small to great, white and yellow, Trumpet Daffodils, and the beautiful new QUEEN OF SPAIN. All parts of the world have rewarded the toils and privations of the Daffodil hunter, but Spain seems to have been in a marked degree the happy hunting ground of these who devote themselves to this fascinating pursuit. Rare Peonies have also been collected by Mr. Barr in Spain, samples of which, not yet in blossom, were to be seen yesterday of those sent home, 1894. They were found in the mountain districts not remote from the land of stream and forest in which the gentle enthusiast of La Mancha sallied forth with his trusty squire in quest of adventures. The Spanish peasants, it seems, marvel at the English stranger's insatiable craving for roots and bulbs, and call him 'herb gatherer,' and cannot divest themselves of the notion that these botanical researches are connected with medicine.

"Meanwhile, Mr. Barr's experiences of wanderings in wild districts of the Spanish Peninsula afford little confirmation of the popular belief of the perils of travels in Spain. Warnings of danger from brigands he has indeed had, but up to the present the brigands have not appeared. Perhaps a poor 'herb gatherer' is not considered worth molesting. Hence Mr. Barr's only anxiety was how to get his botanical treasures conveyed without injury to their destination on the banks of the Thames."

"The great source of the best new varieties, however, is the simple yet wonderful practice of cross-fertilization. This process is now engaging much attention at Long-Ditton.

"It is easy enough, consisting only of the transference of the pollen or fertilizing yellow powder from the anthers of one blossom to the stigma of another. The breeding process, nevertheless, needs care, for the bees who were humming about the flowers yesterday as busily as if midsummer were upon us, would speedily interfere with the florists' operations after the manner that Darwin has so minutely described. Among the novelties to which attention was directed yesterday was the beautiful WEARDALE PERFECTION, as yet so scarce that a single specimen is valued at Twelve Guineas. It is an English seedling with leaves measuring one inch across, and a flower that has a diameter of about six inches. The MADAME DE GRAAFF and GLORY OF LEIDEN, and the bold rich-hued flowers of GLORIA MUNDI with its brilliant orange chalice, also attracted attention yesterday.

"The Daffodils, however, were not without rival claimants to notice. There were the large-flowered species of Dog's-Tooth Violets, various choice varieties of *Fritillarias* with their beautiful spotting, and others. Lastly, there were the beds of Tulips in which the scarlet, rose, vermilion, crimson, purple, pink, white, and pale yellow tints needed only a gleam of sunshine to bring out their splendid combinations of colour.

"Unfortunately, the sky was dull, and a gentle shower, though it gladdened the hearts of the Tulip and Daffodil growers, speedily turned the thoughts of visitors to railway time-tables and the best modes of getting up to town."—DAILY NEWS, April 25th, 1895.

AMONGST THE DAFFODILS.

"When one reaches the Long-Ditton Nurseries of Messrs. Barr and Son, Covent Garden, he is certainly amongst the Daffodils. The picture is glorious, and at the same time impressive, such as can only be seen at rare intervals. Great breadths of all the most popular varieties are seen, such, for instance, as a plot of *Barrii conspicuus*, containing something like 20,000 bulbs. Impress this fact on the mind, and endeavour to realize what the effect will be. Near at hand is a stretch of *Emperor*, with its stout foliage and handsome substantial flowers. Here are about 12,000 roots, and the effect is perhaps even more striking. Certainly, seen as they are at Long-Ditton, Daffodils are well worthy of their popularity, and one might say of even more than is at present accorded to them.

"The names of Barr and Daffodils may now safely be termed synonymous, and it is just possible that the compilers of the next big dictionary will so far recognize the fact as to place it on permanent record. There can be little doubt that if a letter was addressed to Messrs. Daffodil & Sons, the postal authorities would promptly deliver it at 12, King Street, Covent Garden, and in doing so they would be right. If one might be allowed to coin a new word one might dub Mr. Peter Barr a daffodilist, because he has in collecting and studying them, made himself conversant with their history and with the varieties now grown to a remarkable extent. He has wandered (by no means aimlessly) over thousands of miles, ever on the look out for something new, and it is to these journeys that we are indebted for many extremely beautiful introductions—(*The Queen of Spain, Narcissus*, for instance). In this good work of finding new forms and studying old, Mr. Barr has found an able colleague and lieutenant in his son, Mr. William Barr. As all lovers of Daffodils thirst for novelties, and knowing that the Messrs. Barr will continue their energetic labours, they may be sure of having their wishes gratified to a good extent; and in the furthering of the popularity and increasing the cultivation of these plants the firm will, doubtless, secure the reward it so very richly deserves.

"To name all the sorts that are grown at Long-Ditton would be a very big task, but perhaps a short selection may prove acceptable to those readers of the Journal who have not been able to see for themselves.

"First on the list must come the superb WEARDALE PERFECTION, which was figured in the *Journal of Horticulture* for April 19th, 1894. It is certainly one of the most massive of the large trumpet section, though it is closely followed by GLORY OF LEIDEN, which with the first named should on no account be omitted from a collection that has aspirations to perfection. Belonging to this group is MADAME DE GRAAFF, white or very pale sulphur colour. Such varieties as *EMPEROR*, *EMPERESS*, *HORSEFIELD*, and *HER MAJESTY*, are so highly appreciated they need no words here. P. R. BARR, a seedling from *Emperor*, has numerous admirers.

"Belonging to another section, and different in every way, is LEFSELI BEATRICE, one of the most chastely beautiful varieties in commerce. The flower is almost pure white. Another Leedsi of merit is GEM. Of the *Barrii* probably *BARRII CONSPICUUS* is the best, but another charming form is SENSATION.

"Of the *Incomparabilis* group *SIR WATKIN* is usually accorded the place of honour, but another equally worthy mention is GLORIA MUNDI, which is not quite so large and has a much flatter cup. Other grand sorts are *Sulphureus HOGARTH*, *JAS. BATMAN*, and *DUCHESS OF WESTMINSTER*. Besides these there are the ever popular *POPE'S NARCISS* and the charming double forms, but sufficient have now been mentioned to give an idea of how diversified is the collection."—JOURNAL OF HORTICULTURE, May 2nd, 1895.

* Travelling in Spain is attended with less danger to purse and person than perhaps any other country in Europe. Brigandage is a thing of the past. The writer of this footnote, Mr. Barr, has travelled a great portion of the Peninsula on four different occasions, occupying in all about twelve months, and in no single instance has he to complain of the people he travelled amongst; oftentimes he met with exceptional kindness in assistance and hospitality, and, what is remarkable, he knew not their language, so that all was dumb show. Spain is grand hunting ground for the botanist; it is a land of rich scenery for the artist, a sanatorium for the invalid, and for the pleasure-hunter and the indolent, all they could desire.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

MR. WILLIAM ROBINSON ON DAFFODILS AND THEIR ADAPTATION,

In his Paper read at the Conference on Hardy Flowers, Chiswick, July 7 and 8, 1891.

"The most important of all early flowers is the Narcissus. Five years ago I planted many thousands in the grass, the most important being the *Star Narcissus* (*N. incomparabilis*, &c.). They have thriven admirably, flowered well and regularly. They are delightful when seen near at hand, and also effective in the picture. With the common English, Irish and Scotch Trumpet Daffodils I have had good results. The *Tonby Daffodil* is very sturdy and pretty. A very delightful feature of the Narcissus meadow gardening is the way great groups in succession follow each other. Five years ago I cleared a little valley of various fences. Through this runs a streamlet, and we grouped the Poete *Narcissus* near it, and in a little orchard that lay near, and through a grove of Oaks. This year the whole landscape was a picture, such as one might see in an Alpine valley!"—See *The Garden* of April 14, 1894, page 306. The annual effect continues.

THE GREAT PRIZES FOR DAFFODILS, 1896, 4 SILVER CUPS.

BARR'S DAFFODIL SILVER CUPS, specially designed by Mr. H. G. Moon, see back page of Cover.

LONDON.—Royal Botanic Society, Regent's Park, Competition in April (date will be fixed in March).

BIRMINGHAM.—Daffodil Show, Competition in April (date will be fixed in March), Botanic Gardens.

EDINBURGH.—Royal Caledonian Horticultural Society, Competition in April (date not yet fixed), Waverley Market.

DUBLIN.—Royal Horticultural Society of Ireland, Competition in April (date not yet fixed), Royal University Buildings, Earlsfort-terrace.

CULTURE, ADAPTATION, Etc., OF THE DAFFODIL.

DAFFODILS are the most graceful and beautiful of all hardy Spring flowers; they have for centuries adorned our gardens, and withstood uninjured our severest winters better than any other flower of spring.

For beds, mixed borders and shrubberies, the Daffodil surpasses all spring flowers in beauty and for general effect, and when it is naturalized in grass, in orchards, woodland walks, sloping banks, meadows, margins of lakes and ponds, the effect is superb. All Daffodils may be naturalized, but the strong growers make the finest display, and include such sorts as *Emperor*, *Empress*, *Horsfieldii*, many of the white trumpet varieties, all the *Incomparabilis*, *Barrii*, *Leedsii*, *Backhousei*, *Nelsoni*, *Bernardi*, *Tridymus*, *Odorus*, *Burbridgei*, *Poeticus*, etc. Many sorts which do not thrive when cultivated in gardens will succeed naturalized, and we advise that those kinds which do not take kindly to garden culture be removed to the orchard, meadow or hedgerow. In such places the noble flowers of the Daffodil are seen to great advantage. The slender and dwarf-growing sorts, *Nannus*, *Minimus*, *Juncifolius*, *Triandrus*, *Corbularias*, *Cyclaminus*, etc., do well on rockwork, and select places in grass; *Minimus*, *Juncifolius*, and *Triandrus* are found wild in mountain pastures where the soil is shallow and firm; *Corbularia* and *Cyclaminus* where the soil is soft and wet in winter and spring. Mr. T. H. Burroughes, Stamford, has, since 1887, grown successfully *Corbularia citrina* as a semi-aquatic in milk pans and other contrivances without drainage, sunk into the ground so that the tops are four inches below the surface. Peaty soil is then filled in to the level of the surrounding ground; in the upper four inches, which is always moist, the bulbs are planted and root into the lower soil, which should be perpetually wet. We recommend Mr. Burroughes' culture, having followed it with success at our Nurseries. The bottom of a rock garden would also admirably suit, as the drainage from the rockwork would accomplish this without extra labour. Rev. Charles Watson, *Largs*, grows *N. Cyclaminus* with great success in moist loam under a wall facing the north-east; Mrs. Buchanan, *Fairlie*, on a north border has great success. For culture under glass, 3 to 6 bulbs of the strong growing sorts cultivated in a pot, the effect is splendid; of the dwarf growing kinds enumerated 6 to 15 bulbs in a pot give a fine effect, and make charming edgings in conservatories. All kinds of *Narcissi* can be naturalized in grass out-of-doors.

Daffodil flowers can be had from January to June, **FIRSTLY**, by planting early, in pots or boxes to force, and, **SECONDLY**, by planting out-of-doors, in succession, from September to Christmas. These late plantings flower in May.

Out-of-doors the various kinds of Daffodil form a natural succession. In mild seasons, *N. Pallidus præcox* and *N. Obvallaris* flower early in February, and are followed by others in succession.

In arranging Daffodils for effect in the flower garden, or in potting up for indoor decoration, let it be borne in mind they form a natural succession, which is fully explained under the heading of each group, and simply noticed here to draw attention to the fact. **FIRST**, the Trumpet Daffodils are the earliest, one following the other from February to May. **SECOND**, *Incomparabilis*, *Barrii*, *Leedsii*, *Odorus*, *Triandrus*, Early-flowering *Poeticus*, and *Burbridgei*, which begin flowering in March and succeed each other till May. **THIRD**, *Nelsoni*, *Tridymus*, *Backhousei*, *Bernardi*, and *Jougnis*. **FOURTH**, *Biflorus*, late-flowering *Poeticus* and *Burbridgei*, *Schizanthus* and *Gracilis*, which form a succession of flowers to June. In the middle season, representatives from all the groups may be found in bloom at the same time, therefore, those who can make but one visit to our Bulb Nurseries at Surbiton, should do so in April. When grown under glass, all the Daffodils flower probably a month earlier than the periods above named.

CULTURE AND ADAPTATION OUT OF DOORS.—The Daffodil may be grown in any soil and situation, but thrives best in a fertile loam (avoid manure as much as possible), and, in the warmer parts of England, when possible, plant in a situation facing north or north-east, protected, when possible, from cutting winds. In planting, the top of the bulb should be two to three inches below the surface, according to its size; in permanent beds, etc., summer flowers may be cultivated over the bulbs. For such permanent beds use the large-flowering trumpet and *Incomparabilis* varieties, also *Barrii*, *Leedsii*, *Nelsoni*, *Burbridgei*, etc.; for edgings, use the dwarf growing kinds, *Cyclaminus*, *Minor*, *Nannus*, *Minimus*, *Triandrus albus*, *Juncifolius*, and *Corbularias*.

CULTURE AND ADAPTATION INDOORS.—Use three to six bulbs of strong-growing sorts, according to size of bulb, for a 4 or 5-inch pot; small-growing kinds, such as *N. Minimus*, *Nannus*, *Minor*, *Cyclaminus*, *Triandrus*, *Juncifolius*, and *Corbularia*, a greater number of bulbs should be used. These dwarf-growing, small-flowered species are most charming in pots (see list, page 13). If Daffodils are grown for cutting early in the season, plant thickly in boxes of 15 inches by 10, and 5 to 6 inches deep, using ordinary potting soil. The pots or boxes should then be placed out of doors, on a bed of ashes, and covered with 6 inches of the same material, or with cocoa fibre, if it can be had. The pots or boxes to remain out of doors till full of roots, and top growth has commenced. Portions may then be removed indoors, in succession, to a moist forcing-house, and plentifully supplied with water, care being taken that the plants do not get drawn, from an insufficient supply of air.

Cut blooms of Daffodils are always acceptable, and are in abundance out-of-doors at a season when other flowers are scarce. They supplement and associate admirably with hot-house flowers. For about thirty years, for three months in Spring, cut flowers from our collection of Daffodils have been exhibited at the various London Flower Shows and Fortnightly Meetings of the Royal Horticultural Society, also at the Spring Flower Shows held at the Royal Botanic Gardens, Crystal Palace, Royal Aquarium, Birmingham, Manchester, Edinburgh, etc.

At the above-named Exhibitions we have been awarded Gold and Silver Medals, Prizes, Certificates, Votes of Thanks, etc. Our Display of Daffodils at the Second Great Daffodil Conference, April 15th, 1890, was awarded the ONLY GOLD MEDAL. At the Birmingham Daffodil Show, April 18th, 1894, we were awarded the PREMIER PRIZE for the "FINEST DAFFODIL" exhibited. During the season of 1894 we were awarded Sixteen Medals and Five Certificates. The present year we have had many awards.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

 BARR'S DAFFODIL SILVER PRIZE CUPS OFFERED FOR CUT DAFFODIL FLOWERS.
London, Birmingham, Edinburgh, and Dublin, see Special Notices, p. 2 of cover.

SELECTIONS OF

BARR'S High Class & Distinct Hardy DAFFODILS (NARCISSI),

EMBRACING GROUPS MAGNI-CORONATI, MEDIO-CORONATI, and PARVI-CORONATI.

The varieties in these assortments consist largely of the fine hybrids and varieties raised by the late Mr. William Backhouse and Mr. Edward Leeds. They are all distinct one from the other, so that buyers cannot fail to be fully satisfied with them. Daffodils in these assortments may all be used for pot-culture or forced for cut flowers, or planted in beds, in flower borders, naturalized in grass, in woodland walks, orchards, by streams, lakes, etc., the effect in Spring far surpassing that of any other family of plants.

3 each of 100 varieties	120/, 150/, 200/, & 250/.	1 each of 25 varieties	7/6, 10/6, 16/, & 23/.

DAFFODIL SEED in Mixture, for Autumn sowing, saved from our magnificent Collection, per pkt., 1/ & 2/6.

POLYANTHUS NARCISSI (The Many-flowered Daffodils).

See *General Bulb Catalogue*.

EXPLANATORY NOTES.

The following list of Daffodils embraces the highest class, and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. The varieties represent the cream of our Collection (about 500 kinds), mostly new sorts, some of which were offered for the first time 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, and 1895.

*	New Daffodils introduced by us up to	1886.	†	New Daffodils introduced by us up to	1891.
	"	1887.	††	"	1892.
+	"	1888.	***	"	1893.
+	"	1889.	§§§	"	1894.
§	"	1890.	++++	"	1895.

Those without any special indication were known before these New Daffodils were introduced by us.

Q Explanation why different sized types have been used in the NAMES of the Daffodils.

- (1). **EMPEROR.** This type indicates the higher quality.
- (2). **ALBICANS.** This type indicates the next quality.
- (3). **MAJOR.** This type indicates the lower quality.

The very distinct species which do not admit of comparison, such as *Corbularia*, *Cyclamineus*, *Minimus*, etc., are placed with the higher quality, and those which rank above the higher standard are indicated by the word *extra*.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

DAFFODILS. — GROUP I. — MAGNI-CORONATI (BAKER).

Ajax of Salisbury, Haworth, and Herbert, Pseudo-Narcissus of Parkinson; including Corbularia (Bulbocodium), The Hoop Petticoat, or Medusa's Trumpet.

DISTINGUISHING CHARACTER.—Crown or trumpet as long or rather longer than the divisions of the perianth.

The varieties in Group I. are commonly called Trumpet Daffodils, and flower in the following succession: N. Pallidus præcox, Minimus, Nanus, Minor, and Obvallaris, from February, closely followed by Cyclamineus, Golden Spur, Henry Irving, Santa Maria, Oporto Yellow, Rugilobus, Major, Spurius, Cambrius, the English Lent-Lily, the Scotch Garland Lily, Horsfieldii, Empress, Johnstone Queen of Spain, Princeps, Cernuus, Colleen Bawn, etc., which are followed by Emperor, Maximus, Dean Herbert, Michael Foster, James Walker, the two Camms, the two Burbidges, Dr. Hogg, Cernuus pulcher, Exquisite, Grandis, etc.

All the Trumpet Daffodils are prized for pot-culture, flowering under glass with the Hyacinth, and should be cultivated in the same way, three to five bulbs in a 4 or 5-inch pot. The cut flowers of Daffodils are much in demand for bouquets and vases. For General Cultural Directions, see page 3.

NARCISSUS CORBULARIA (BULBOCODIUM).

The Hoop Petticoat, or Medusa's Trumpet Daffodils.

These are beautiful in pots, 6 or more bulbs in a 4 or 5-inch pot, or a greater number in flat pans. For rockwork, edgings and small beds they are all charming (see page 3). All except Monophylla should be treated as semi-aquatics.

AJAX, or TRUMPET DAFFODILS.

Self-Yellow Varieties.

All the Trumpet Daffodils, cultivated in pots, are exceedingly decorative indoors, and used extensively for this purpose, 3 to 5 bulbs in a 5-inch pot, or many bulbs planted in boxes for early cutting, see p. 3. For beds, borders, and naturalization unsurpassed.

CERNUUS FLORE ELEGANTISSIME PLENO (The Double White Trumpet Daffodil), a great beauty, extra, very scarce, price on application.			

DAFFODILS.—GROUP II.—MEDIO-CORONATI (BAKER).

Queltia, Philogyne, Ganymedes, etc., of Salisbury, Haworth, and Herbert; Peerless, Nonsuch, Chalice-Shaped Crown, etc., of Parkinson.

DISTINGUISHING CHARACTER.—*Crown or cup half as long as the divisions of the perianth, but in one or two cases three-quarters as long.*

The graceful varieties of this group are hybrids, excepting *Triandrus*, *Odorus*, and *Juncifolius*, which are species. *Incomparabilis* is found wild in France, but Herbert, Leeds, and Backhouse produced it by crossing *Poeticus* with a Trumpet Daffodil. *Macleaii* (*Panza bicolor of Salisbury*) is considered to be a hybrid between a *Tazetta* and a Trumpet Daffodil. Although we have no positive data as to the parentage of all the new hybrids and varieties described in this group, we think it may fairly be assumed that *Poeticus* and the Trumpet Daffodils gave all the varieties of *Incomparabilis*, *Barrii*, *Lcedsii*, "the *Eucharis-like Daffodil*," *Humei*, *Nelsoni*, *Backhousei*, and *Sabini*. *Bernardi* we know to be a hybrid between *Poeticus* and *Variiformis*, *Mr. Barr* having collected it from amongst these two species. *Tridymus* is a hybrid between a *Tazetta* and a Trumpet Daffodil.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of great elegance and beauty, and, as cut flowers, are extensively used for furnishing vases and table bouquets.

All the varieties enumerated in Group II. are prized for pot-culture, flowering under glass with the Hyacinth, and should be cultivated the same way, 3 or 5 large bulbs in a 5-inch pot; *Narcissus* with small bulbs, such as *Triandrus* and *Juncifolius*, 6 to 12 bulbs to a 5-inch pot. The cut flowers of this Group are much in demand for bouquets and vases. *General Cultural Directions*, p. 3.

NARCISSUS INCOMPARABILIS.

NONSUCH, PEERLESS, AND CHALICE-CUPPED DAFFODILS (*Star Narcissus*.)

All the varieties of *Incomparabilis* are exceedingly decorative in pots, and are extensively used for this purpose, 3 or 5 bulbs in a 5-inch pot. For beds and borders very decorative, naturalized in grass very effective. See what *Mr. William Robinson* says of them under the name "Star Narcissus," p. 3.

DAFFODILS.—GROUP III.—PARVI-CORONATI (BAKER).

The Small-crowned Daffodil or True Narcissus, which includes

Burbidgei and Poeticus (the Purple-ringed Daffodil); Biflorus (the Primrose-Peerless Daffodil); Polyanthus or many-flowered Narcissus (Hermione and Helena of Haworth); Gracilis, Schizanthus orientalis, and Sweet-smelling Jonquills.

DISTINGUISHING CHARACTER.—*Crown less than half as long as the divisions of the Perianth.*

In this series, Poeticus (the purple-ringed Daffodil) is the true Narcissus; Burbidgei is a hybrid one remove from Poeticus, and is the connecting link between Groups II. and III. (*See Coloured Plate in "The Garden," 1830.*) Biflorus is Parkinson's Primrose-Peerless, and there is no doubt now as to this being a hybrid of Tazetta and Poeticus; Mr. Barr in his travels, 1894, found it and its parents growing together in two different localities in the South of France. Gracilis and Tenuior are the Helena of Haworth; Jonquil, the Jonquilla of Linnæus; Polyanthus Narcissus, the Hermione of Haworth and Tazetta of Sibthorp.

The early-flowering Poeticus varieties commence flowering in March, and the late-flowering varieties close the Daffodil season in June. Burbidge's hybrids of Poeticus flower in succession from March to middle of May. Gracilis, Schizanthus orientalis, and the Double White Gardenia-flowered Daffodil, are among the latest to bloom.

☞ The Daffodils in this Group are graceful pot-plants for indoors, flowering with the Hyacinth, and should be cultivated in the same way, 3 or 6 bulbs in a 4 or 5-inch pot. The cut flowers of this section are greatly in demand for bouquets and vases. *General Cultural Directions, page 3.*

NARCISSUS BURBIDGEI.

(*Star Narcissus.*)

Burbidge's Hybrid Poet's Daffodils.

These are all light and graceful for indoors 3 to 6 in a pot, and elegant in beds, borders, and naturalized. See what grand effect Mr. William Robinson produced with the varieties of Poeticus at Gravetye Manor, page 3.

The Burbidgei Narcissus differ from N. Poeticus in the cup of the flower being a trifle longer; they commence flowering before Poeticus ornatus, and continue flowering in succession one variety after another from March to the middle of May.

NARCISSUS POETICUS.

(*Star Narcissus.*)

The Purple-ringed Poet's Daffodil.

Poeticus divides naturally into early and late-flowering varieties, a circumstance which is not generally known. It is from the early section, especially Poeticus ornatus that Covent Garden is supplied with forced cut flowers from January to March.

March and April Early-flowering Poeticus.

Very beautiful for indoors, 5 bulbs in a 4 or 5-inch pot. Charming in beds, borders, and naturalized. See what Mr. William Robinson says of the beautiful effect of these at Gravetye Manor, page 3.

	per doz.	each	s.	d.	s.	d.

Elegant in pots, and in the flower garden.

GRACILIS, an elegant rush-leaved Daffodil, 3 to 5-flowered, pure yellow, *sweet-scented*per 100, 15/

TENUIOR (slender straw-coloured daffodil), perianth sulphury white, cup yellow, several flowers on a stem, per 100, 15/

POLYANTHUS NARCISSUS will be found in General Bulb Catalogue.

CHARMING SMALL-FLOWERED DAFFODILS.

For pot-culture, these are very beautiful in-doors, and on rockwork most charming.

Mr. T. H. Burroughes, Stamford, has successfully grown, since 1837, the **Large Sulphur Hoop Petticoat** Narcissus in milk pans and troughs, without drainage, filled with peaty soil and sunk in the ground, the rim of pan or trough four inches below the surface; in the four inches of soil above the rim the bulbs are planted, and the soil kept always in a wet quagmire condition. We have tried this mode of culture with success, and recommend it for all the varieties of *Corbularia* except the **White Hoop Petticoat**, which should be grown in pots or at the foot of a warm south wall. *N. Cyclamineus* likes moisture, but not quite so much as the **Hoop Petticoat**; it delights in moist loam and a situation facing the north. *N. Minimus*, *N. Triandrus*, and *N. Juncifolius*, are found in a wild state growing in shallow firm soil.

A SELECTION OF

On page 3 will be found an extract from Mr. William Robinson's Paper read at the CONFERENCE ON HARDY FLOWERS, CHISWICK, July 8 and 9, 1891. The grand effect produced, combined with the pleasure he enjoyed at Gravetye Manor from Narcissi planted in MEADOW, ORCHARD, and OAK GROVE, was such as he might have experienced in an Alpine valley, but with this difference, he could gaze on the scene and enjoy the pleasure daily, and all this at a comparatively small outlay. Mr. Robinson has had a successful experience of ten years with his naturalized Daffodils

BARR'S BEAUTIFUL "ENGLISH AMATEUR" TULIPS.

May-flowering.

Awarded at the Temple Show, the Royal Horticultural Society's Silver Cup, May 25th, 1893,
and the R.H.S. Gilt Flora Medal, May 8th, 1894.

These beautiful Tulips in the South of England commence flowering according to the earliness or lateness of the season, from the first to the last week in May. Dr. Hogg can testify that if looked after they may be enjoyed for a month. The "English Tulip" is pre-eminently an amateur's flower, and has been so for upwards of 300 years. London was at one time the centre of Amateur Tulip growers, Scotland then dividing the honour. The Amateur element at the present time is mainly centred in the Northern Counties of England where the greatest activity prevails in raising new varieties. The Home Counties are now reasserting their ancient position and have their annual Tulip shows. Amateurs who may be induced to take up Tulip culture will be pleased to read the following extract from the *Manchester Guardian*, 2nd June, 1892, from the pen of the late Mr. Samuel Barlow, one of the greatest authorities on "ENGLISH AMATEUR" TULIPS:—

"The best 'Amateur' Tulips known to exist, or that have ever existed, have been raised in England, principally in the Northern counties—Lancashire, Yorkshire, and Derbyshire. Over forty years ago the late Dr. Hardy, of Warrington, in a series of papers to the *Midland Florist*, completely settled all the points of excellence which go to make a first-class Florist Tulip, and his definitions have never since been disputed. Since then the cultivation of Florist Tulips has much improved, especially in the three counties named, although, singular to say, it has almost died out in the South of England, where, fifty years ago, the most enthusiastic Tulip growers made London their centre for exhibitions. There are distinct evidences now of a revival of interest in the South of this grand old flower, and I hope that the Exhibitions of the Royal National Tulip Society will give additional stimulus to the cultivation and love for this fascinating flower."

Barr's Prize Medals for the best Collection of "English Amateur" Tulips will be awarded by the Southern Branch of the Royal National Tulip Society in London. Notice of date and place of meeting will be given in due time.

The Southern Branch of the **Royal National Tulip Society** will offer Prizes for stands of 12 dissimilar flowers, 6, 3, and 2, also for the premier flower of the show.

The Rev. Francis D. Horner, a most successful Amateur Tulip cultivator and raiser of new varieties, read a valuable paper on "**English Amateur Tulips**" to the Fellows of the Royal Horticultural Society, April 19, 1892, and the same will be found in Vol. XV. of the "*Journal of the Royal Horticultural Society*," page 99. We commend it for perusal by intending Amateur Tulip Cultivators.

In the "*Journal of Horticulture*," October 25th, 1894, commenced a series of articles on "English Amateur Tulips," by Mr. James W. Bentley, Hon. Secretary to the Royal National Tulip Society, wherein he traces the history and introduction of this Tulip into Europe about the year 1550, and its rapid development by seeding into numerous varieties. In England it made its appearance about the year 1575, and quickly became popular in the neighbourhood of London, where it was extensively grown, so that in the year 1629, Parkinson, in his "*Paradisi in Sole*," enumerates 140 varieties, and expresses the pride and delight of the amateur cultivators, and the almost impossible power of man in description to depict the beauty, variety, and distinctness of every flower. In those early days the Dutch were the principal raisers of new Tulips, but in these latter days the English hybridizers have so far surpassed them that the Dutch Florist Tulip is no longer to be found in an English Amateur's collection. Mr. Bentley's articles cover the entire field of all that relates to this wonderful flower, such as the properties that go to make an "**English Amateur**" Tulip, of which it may be said—

"This is an art.
Which does mend Nature, change it rather, but
The art itself is Nature."—*Shakespeare*.

Our Woodcuts represent the upper sections of Tulip petals. The one on the left shows what is termed

a **feathered flower**, the colour being confined mainly to the edge of the petal. The right hand block represents a **flamed flower**, the colour runs round the edge of the petal, and in the centre the beam breaks into a flame.

These Woodcuts represent typical markings. But it is a well-known fact that these "English Amateur" Tulips frequently vary from one year to another, and a feathered flower will sometimes become flamed, and a flamed flower feathered. The colour will sometimes be heavier and sometimes lighter, this difference being often the result of culture. *All this is fully discussed in Mr. Bentley's papers above referred to.*

Our Collection of "English Amateur" Tulips numbers above 450 varieties, of these 20,000 to 30,000 bulbs will be planted this Autumn, and the flowers may be seen by visitors during May, 1896, at our Nurseries, **Long Ditton**, close to the Surbiton new Recreation Grounds, a few minutes' walk from Surbiton Station, or by cab to **Pound Farm Entrance of Nurseries** (fare 1/).

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

We regret to announce the death of our friend Mr. Joseph Lakin, of Cowley, one of the oldest **Amateur Tulip growers**, whose collection of English Amateur Tulips was one of the most typical in England. To prevent the loss of so rich a collection, the same was purchased by Messrs. Horner, Bentley, Needham, and Barr and Son.

TWICE TEN THOUSAND TULIPS.

"No; 'alliteration's artful aid' is not brought into requisition in the headline for the purpose of effect, nor as a mere freak of fancy, but because it represents a simple fact in condensed form, which, being interpreted in prosaic amplification, means that 20,000 Tulips were seen flowering in the Long Ditton Nurseries of Messrs. Barr & Son. 'Then, why not have said so without so many tinkling 't's'?' That, it may be assumed, is what some sharp critic of the 'Saynor' type may be asking. Well, let him try to accomplish the literary feat, and if he succeeds not, to at once admit the necessity of the predominating consonants in the interests of veracity. But, again, it may be urged that the number of Tulips indicated is nothing extraordinary, that nearly as many may be seen in some of the London parks earlier in the season, and more in some market growing establishments, to say nothing of the hundreds of thousands of blooms glittering in the sunshine in the bulb farms of Holland. Granted, but with an important qualification, that they are not the real, true, genuine, **English Florists' Tulips**, of which the Ditton collection numbers nearer 30,000 than 20,000, or probably the largest assortment in the world of '**English Amateur' Tulips**."

"Yet two other questions may be asked. 1. Why are they grown in such numbers? 2. Why are they accorded the specific designation—English? To the first question it may be said that they afford much pleasure to the senior bold bulbarian and to his son, Mr. William Barr, who knows them and grows them so well. But this is not all, for others, many others, enjoy them too, and find their way to the canvas-covered beds at Tulip time. Nor is that quite all either, for it would seem as if a compact had been entered into and a determination arrived at to popularise these very distinct, often erratic, certainly beautiful, and in some respects wonderful flowers, and to distribute them far and wide. And why not? The desire is perfectly legitimate. It was, to say the least, a bold step to buy collections, large or small, named and unnamed, at home and abroad, wherever obtainable, when the flowers were, if not on the down grade, certainly *not* in demand."

"And then the after labour in marking, sorting, selecting, rejecting, classifying, and naming has been such as few could conceive, and not one man in ten thousand would undertake and carry out as Mr. William Barr has done. Only an actual deep-seated love for the flowers and a sense of duty in attaining the object in view could have impelled him to persevere with untiring persistency year after year, for assuredly he could have spent his time more profitably if profit had been his immediate object. If ever this highest type and most distinguished class of Tulips should become popular and generally grown in gardens, the result will be due to the critical acumen, care, patience, activity, and industry of this ardent young Tuliparian more than to any other man; and if, perchance, he should at some distant day find the pursuit a commercial success, it will have been so well won that no one will begrudge him its enjoyment."

"But to the second question, Why are these particular Tulips called English? The answer is very simple: Because they *are* English. All the best florists' Tulips at Ditton and elsewhere have been raised by English amateurs. They are the result of fertilisation and years of care in preservation and waiting for the development of their final characters. There are florists' or amateurs' Tulips in their 'broken' form, as bizarres, with their golden ground and rich crimson to black markings; byblæmens with their violet, purple, or maroon colouring on a white ground; also the translucent roses, the white of which is more or less covered with the most delicate tracings of rose, crimson, and soft scarlet—there are also varieties of all these of Dutch origin, but it is rare to find one having the short smooth cup and clear basal disc of yellow or white that invest the English flowers with such value. Some of the Dutch flamed and feathered Tulips are showy enough, but in most the petals are too long, thin and irregular, while the flakes of colour run down to the base of the cup. These are faults which the true English fancier cannot endure. The clear central disc is the hall mark of excellence, and while the seedlings are in the self-coloured stage, imparts to them their value and beauty—in fact, some of the selfs are so charming that it seems almost a pity they should change. Yet change they will, and do, sooner or later; but no one knows when nor what they will be when the mysterious transformation occurs. This breaking is sometimes a sudden, sometimes a deliberate process. In rare instances the colouring is first seen as if through a cloud; in others, one or more petals may gain a year's start of the rest, then comes the period of rectification. Moreover, there is to the trained eye a change in the leaf when the breaking is in process, and then does the florist watch with interest the unfolding of the petals, as he may have a gem of the first water, or, on the contrary, he may have simply lost a charming 'mother' flower by this change."

"Just as Tulips are slow in showing their true character, so are the majority of persons who admire the flowers for decoration slow in turn to appreciate their highest attributes. It is as well so, or what would become of the varieties that are lacking in some of the essential properties which the advanced amateur seeks? These, in many respects beautiful fugitives, may be regarded as so many letters in the Tulip alphabet which play an initial part in floral education. The learner of music does not at first purchase the most costly instruments, but is content with those of moderate price. So it is with flowers including Tulips, and these are classed to meet the means of beginners in their culture. Time and the superior examples exhibited by experts at shows or in home collections, do the rest, and the new growers, if their love is strong, gain knowledge as they go, and eventually 'break' into florists. There is choice enough in Tulips in the Ditton collection, not alone in the English florists' varieties in the various grades, but in the gay 'Darwins'—valuable for borders and cutting, the gorgeous Gesnerianas, the delicate 'Picotees,' the quaint 'Parrots,' and sundry others, but while all are beautiful, and have their admirers increasing in number yearly, the refined and correct English florists' Tulips bear the palm. Varieties cannot be usefully named here, as price is a governing factor, and both the cheapest and the rarest can be found in lists which all who may desire can obtain and make their own selections."—*Journal of Horticulture*, May 23rd, 1895.

THE ENGLISH "SHOW" TULIP.

"I learn with much pleasure that the enterprising seed and bulb grower, Mr. Peter Barr, of King Street, Covent Garden, is determined to give all amateur florists the opportunity of cultivating and exhibiting the old but much neglected 'Show' Tulip. Mr. Barr has, as many may know, displayed great efforts and spared no expense during the last few years in collecting a most valuable and extensive assortment of this most gorgeous class of florists' show flowers, and which, from the simplicity of their culture, are specially adapted for amateurs who may have the florists' fancies running in their blood! The prices of the show Tulip now are not what they were half a century ago, 'five pounds to fifty pounds each bulb,' for, according to 'Barr's Catalogue,'

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

single bulbs range from 1s. each! Surely, then, there is a chance for all amateurs to start with a bed of show Tulips at a comparatively trifling cost.

"Mr. Barr appears also to be determined, now that he has possessed himself with about thirty thousand bulbs of the Show Tulip, that they shall not be kept to himself in his own grounds, for I see that he is, in conjunction with Mr. James W. Bentley (Hon. Sec. of the Royal National Tulip Society), arranging for a show to be held in London next year in May, to suit the growers of the South, and, as far as possible, the Northern and Midland Counties growers. Silver medals will be offered by Messrs. Barr & Son and by Mr. Bentley. There is thus a favourable opportunity for all Tulip cultivators, and especially new beginners in the south, to put their 'shoulders to the wheel' in supporting the great efforts of Mr. Barr, in his anxiety to resuscitate in the neighbourhood and suburbs of London this old and glorious variety of florists' flowers, and which our grandfathers and great-grandfathers cultivated with pride and abundant love!

"There can be no question as to the situation around London being favourable to the cultivation of the Tulip, which the specimens exhibited last May, at the Drill Hall, by Dr. Hogg, Messrs. Barr & Son, and other southern growers fully corroborated. I have been a grower and exhibitor for nearly forty years, but last year was the first London show of Tulips I had ever had the pleasure of witnessing, and never previously had I seen such magnificently grown Tulips as those exhibited by Dr. Hogg and Messrs. Barr & Son, and the refinement in markings of Feathered Talisman, Sir Joseph Paxton, and Doctor Hardy, exhibited by Messrs. Barr, was as near perfection as possible.—JAMES THURSTAN, The Green, Cannock."—*Gardening World*, Dec. 11th, 1894.

MAY-FLOWERING TULIPS.

SELECTIONS AND MIXTURES OF

Barr's Beautiful "English Amateur" Breeder Tulips, Bizarres, Byblœmens, and Roses, in mixture	per doz.	5 6

EXPLANATION OF THE TERMS "BREEDER" AND "RECTIFIED."

Rectified Tulips are those in which the original self colour has changed, or, as it is termed by Amateurs, broken into a flamed or feathered variegation.

Breeder Tulips are those with self colours which have not yet changed, or, as Amateurs term it, broken into a variegation, but at any time they may become Rectified.

"Extra Selected" are specially marked flowers of superior excellence.

Those varieties offered by the dozen make effective beds.

Varieties not priced in the following list a quotation will be given on application.

BARR'S BEAUTIFUL HARDY LILIES.

FOR PLANTING IN BEDS, BORDERS, AND FOR GREENHOUSE DECORATION.

THE LILY, for variety of colour, chasteness, and beauty of form, is matchless amongst hardy plants. The flowering commences in May, and a continuous unbroken succession of bloom, from species of different countries, is maintained till the frosts of autumn destroy the last unexpanded flower buds. The height is given to each Lily in feet.

For cultural directions see No. 4 Plant Catalogue, sent on application.

AURATUM (The White Golden-rayed Crimson-spotted Hill Lily of Japan), this is, indeed, the Queen of Lilies, and should have a place in every garden and greenhouse. It is of simplest culture and perfectly hardy.

We are expecting our usual consignment of this beautiful Lily to arrive in November, December, and January from Japan, and we are booking orders for delivery immediately on arrival, at the following extremely moderate prices. Those who have beds of Rhododendrons may also have beds of this "Queen of Lilies" for a succession of flowers by planting these bulbs freely amongst the Rhododendrons. Those who have beds of Pæonies should also plant in the same beds *L. auratum*. Along the margins of evergreens, clumps of *L. auratum*, 6 to 12 bulbs in a clump planted 3 to 6 inches apart, produce a grand effect. North or north-east aspect, unless the ground is shaded, is the more preferable situation for this Lily.

Splendid Large Bulbs, producing numerous flowers, 12 for 7/6, 25 for 14/, 50 for 26/, 100 for 50/.

Very Large Bulbs, producing an abundance of flowers, 12 for 10/6, 25 for 20/, 50 for 38/, 100 for 70/.

Smaller Bulbs, but of good flowering size..... 12 for 5/6, 25 for 10/, 50 for 19/, 100 for 36/.

(A few Special Monster Bulbs, 1s. 6d. each.)

BARR'S HARDY DOUBLE CHINESE PÆONIES.

These magnificent Juns and July flowers are large and handsome, varying in colour from pure white to blush, rose, pink, and bright and deep crimsons, while most of them are deliciously rose-scented. The Ornamental and massifs foliage combined with the great masses of flowers, rival in effect the finest Rhododendrons in beds or in herbaceous borders or intermingled with shrubs. The flowers are valuable for cutting, they travel well, and last long in water. Clumps of Daffodils and Lilies, especially Auratum, Speciosum, and Tigrinum should invariably be associated with them, as the one flowers before the Pæony and the others flower later.

BARR AND SON'S SELECTIONS OF HARDY CHINESE DOUBLE PÆONIES.

100 in 100 beautiful varieties...	130/, 170/, & 210/.	12 in 12 beautiful varieties	...10/6, 15/, 21/, & 30/.

Cheap Offer of Double Chinese Pæonies for large plantings in wild gardens, woodlands, shrubberies, etc., comprising whites, blushes, pinks, roses, and reds of shades, our own Selection, per 100, 75s.

For the convenience of purchasers we have arranged the Pæonies into sections, according to their colours.

All the varieties quoted are first-class sorts; no one therefore need hesitate in making their own selection.

Large clumps can be supplied of most of the sorts at double the price of single plants.

HARDY DOUBLE EUROPEAN PÆONIES.—May-flowering.

Few plants are so elegant in outline and so decorative as the Old Double Red, Rose, and White Pæonies. In shady groves or under tall trees these Pæonies are happy, while in beds or as single specimens they are effective.

	p. doz. each.	s. d. s. d.

BARR'S BEAUTIFUL HARDY SINGLE EUROPEAN PÆONIES.**May and June-flowering.**

Elegant Herbaceous plants bearing in profusion flowers of great beauty, and valuable for flower borders, beds on lawns, shrubberies, rock-gardens (as on the rockwork at Kew Gardens), and for naturalization. They will also thrive under large trees, thus supplying the floral display often wanting in shady walks, etc.

For a full descriptive list of the above-named Pæonies, see Plant Catalogue, No. 4, free on application.

BARR'S BEAUTIFUL HARDY IRISES.**PLANT SEPTEMBER, OCTOBER, AND NOVEMBER.**

For Flower Beds, Borders, Shrubberies, Edgings, Ponds, and Naturalization.

The Iris is the "Orchid" of the flower garden; its blossoms are the most rich and varied in colour of hardy plants. It should be extensively planted in flower and shrubbery borders and wild gardens, and by lakes and ponds. As a cut-flower the Iris is most valuable, competing in richness and variety of colour with the choicest and most beautiful of Orchids. When established, the plants yield a great quantity of bloom.

(Barr and Son, 12 and 13 King Street, Covent Garden, 1895.)

BARR'S CHRISTMAS AND LENTEN ROSES.

HELLEBORUS NIGER, OR WHITE CHRISTMAS ROSE.

These flower during the winter months; and to have pure white blossoms for Christmas decoration, the plants should be protected at flowering time. For naturalization in wild gardens, orchards, and on moist grassy banks facing the north, etc., the Christmas Rose is a grand plant. *We offer good clumps as below.*

Selections of Christmas Rosess, 6 in 6 varieties, clumps, 7s. 6d., 10s. 6d., & 15s.
 " " " 12 in 6 " clumps, 15s., 21s., & 30s.

	each—s. d.
Helleborus niger type, the Old White Christmas Rose	1 0
" " maximus , the Great Christmas Rose, a grand species, flowering October to January, with large dark green leaves, and very large white flowers	1s. 6d. & 2 6
" " niger Bath Christmas Rose, one of the most useful varieties, bearing large pure white flowers from December to March	1s. 6d. & 2 6
" " Iuvena , "St. Brigid's" Christmas Rose, large pale green leaves, and large snow-white imbricated flowers, produced in great profusion from December to February	3 6
" " Apple Blossom (ruber), flowers rosy white, outside of petals rosy purple, very distinct and beautiful, flowering from February to April	3 6
" " scoticus , a fine variety with white flowers, faintly tinged rose, from December to March	2 6
" " Riverstoni , flowers white, tinged rose, fragrant, February and March	2 6
" " vernalis (syn. <i>caucasicus</i>), flowers snow-white, outside of petals tinged rose, fragrant, December to March	1s. 6d. & 2 6

BARR'S HELLEBORUS ORIENTALIS, OR LENTEN ROSE.

These are quite distinct from Christmas Roses. The plants are taller, and generally with a bushy branched growth, and resemble great floral bouquets at a season when the temperature is too cold for most other plants to expand their blossoms; in colour the flowers range from pure-white to deep plum-purple, with the intermediate shades of rose and pink, the petals inside being more or less spotted. *The different varieties make good showy plants when grown in pots.*

BARR AND SON'S SELECTIONS OF LENTEN ROSES (ORIENTALIS AND VIRIDIS VARIETIES).
